

SWMSoft

Easy to Use Operations and Maintenance Software

SWMSoft™ has been designed and developed to provide up-to-date, comprehensive inventories of all your storm water management assets and facilities. Designed to assist in maintenance planning, reduce liability and minimize operational costs while arranging data collection and storage from bathymetric surveys, equipment inventories, photographs, and field inspections. SWMSoft also forecasts sediment deposits and supports detailed maintenance tasks and budget requirements.

Benefits

- ◆ Helps organize information and provides insight into the current state of your stormwater assets.
- ◆ A single repository for facility related data, including as-builts, sediment surveys, photos, historical maintenance activities.
- ◆ Saves time when performing inspections and improves consistency between inspections.
- ◆ Keep data organized and easily accessible.

Key Features

- SWMSoft gives municipalities a platform to maximize SWM efficiency while minimizing costs and liability. Each facility identifies recommended action items, components in need of maintenance, task descriptions, work order status, request / due dates.
- SWMSoft models and forecasts sediment accumulation, using bathymetric survey data, to predict clean-out dates when the pond efficiency is compromised by sedimentation.
- SWMSoft offers a comprehensive, GIS-enabled inventory of all your municipal storm water management facilities. This unified system of asset management gives you a complete catalogue of all facilities and outstanding maintenance tasks.
